① database → table: categories, products

② project → App (MVC)

BLL

DAL

APP → BLL → DAL (connection) then build

solution go under package install (3 package) → Build

③ connection string → APP → appsettings.json

④ solution (1) Terminal open then scaffold.

⑤ Program.cs (1) builder. services. Add DbContext

<PmBsp26> (opt) ⇒ opt UseSqlServer

⑥ Repo folder → CategoryRepo — ProductRepo

↓

Create

public Category Get (int id)

public List <Category> Get () {

public bool Update (Category c)

" " Delete (int id)

Same as
CategoryRepo

Just
name
change

⑦ DLL → DTO (folder)

↓

product $\hookleftarrow$ category foreign key

DTO class, same as DB by default classes

(vii) BLL $\rightarrow$ AutoMapper 14

(ix) Mapper Config.cs

(x) Create Services

(xi) Dependency injection in program.cs

$\rightarrow$ (xii) CategoryService

ProductService (same as category, just name change)

(xiii) App $\rightarrow$ Controller (ProductController)

injection on ~~APP~~ program.cs
